

# The Tools You Need to Accelerate Rare Disease Drug Development

Patients with rare diseases have high unmet medical needs.

Over  
**7,000**  
Rare Diseases Identified

Only  
**5%**  
of Rare Diseases Have a Global Approved Drug

In 2024, CDER approved 50 novel drugs, but significant unmet needs persist worldwide.

What makes something a “rare or a neglected disease”? There is no universally accepted definition as the prevalence criteria varies by region/country.

Regulatory Agency	Prevalence Criteria	Reference
U.S. FDA	200,000	Orphan Drug Act, 1983
EMA	5/10,000	EC 141/2000
Japan PMDA	50,000	JPMA, 2008
Australia	2000	Therapeutic Goods Act, 1989

Rare Disease Affects More Than  
**300 M**  
People Worldwide

Countries worldwide have implemented various mechanisms to encourage the development of treatments for diseases

**50%** of People Affected By Rare Diseases Are Children

**30%** of Children With These Debilitating Diseases Will Not Live To See Their 5th Birthday

**80%** Of Rare Diseases Are Genetic

While rare disease drug development is challenging, the experts at Certara can help!

### Small patient pools

We use clinical pharmacology expertise in combination with MIDD tools to discern effects in small patient populations.

### Sensitive patient populations

We model the impact of a new drug on other disease states or untested populations.

### Unique regulatory landscape

We provide end-to-end regulatory support and medical writing services: from meetings with health authorities to preparation and submission of marketing applications.

### Reimbursement challenges

We develop a quantitative multi-criteria decision analysis-based framework adapted to the very specific issues in rare disease development and access including quality of evidence, disease severity, ethical considerations, population-level factors, economic impact of the disease, and specific budgetary impact.

We have broad therapeutic expertise in rare disease drug development
