

Phoenix Quantum

Introducing Phoenix Quantum software packages

Phoenix is the premier software platform used by more than 5,000 pharmaceutical and biotech companies, veterinary and academic researchers, along with regulators from the Food and Drug Administration, Product Development and Management Association, Medicine and Healthcare Products Regulatory Agency, European Medicines Agency and other key agencies to analyze, manage, report and validate pre-clinical and clinical pharmacokinetic (PK), pharmacodynamic (PD) and toxicokinetic (TK) data.

Leading pharmaceutical and biotech organizations rely on the Phoenix platform and tools across their global research and development footprint, in a significant way. In recognition of that significance and best practice scientific use of these PK/PD tools, we have created Phoenix Quantum Packages. These packages have been organized to align with the workflow activities used by leading scientists and are now offered in attractively priced options. These products can help push your research forward and enable faster and more reliable decisions, while reducing the potential for error in pre-clinical and clinical drug development.

Phoenix Quantum packages can help companies encourage collaboration, increase analysis efficiency and accuracy while saving money. And with the Quantum packages, key Phoenix products are even more accessible to users within a company. These packages are also designed to offer flexibility, accessibility, visibility and predictability in the procurement of an organization's software licenses.

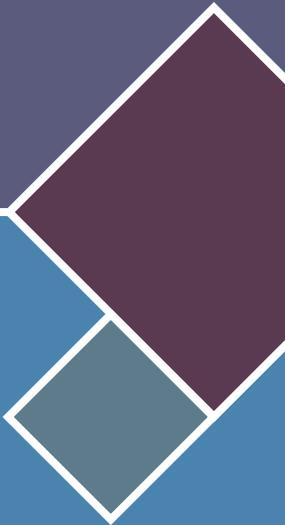

Certara currently offers two Phoenix Quantum packages. Both require a minimum purchase, starting at 50 registered users, and either a three or five year contract.

Package 1 Included Software:

- Phoenix WinNonlin, the industry standard for PK/PD analysis
- Phoenix Connect, a solution that connects incoming data with PK/PD analysis within the Phoenix platform, as well as connecting to a variety of external data sources
- Phoenix WinNonlin Validation Suite to support validation of Phoenix WinNonlin in a regulated environment

Package 2 Included Software:

- All the products included with Package 1
plus
- Phoenix NLME, an easy-to-use and fully integrated population PK/PD tool that enables new and expert modelers to perform their work in a single, validatable environment
- Unlimited distributed computing license.

About Certara

Certara is a leading provider of decision support technology and consulting services for optimizing drug development and improving health outcomes. Certara's solutions, which span the drug development and patient care lifecycle, help increase the probability of regulatory and commercial success by using the most scientifically advanced modeling and simulation technologies and regulatory strategies. Its clients include hundreds of global biopharmaceutical companies, leading academic institutions and key regulatory agencies.
